

Get Total Control and Unmatched Security

Caterpillar's national maintenance support offers a remote monitoring and management system that connects you to your equipment through a secure network, using on-site hardware, remote communication technologies and web-based software. You'll get complete control over your equipment – from just about anywhere in the world.

With our PointGuard system monitoring and management services, it's like being right on-site, keeping an eye on your operation, even if you're hundreds or thousands of miles away. PointGuard will:

- Provide trained Coordinators 24/7/365, who will follow consistent response procedures defined by you
- Track events, incidents and performance levels remotely, helping you analyze downtime and maximize uptime
- Collect a full spectrum of performance data, then use that data to create useful reports that help you understand how your systems are performing
- Test standby and emergency systems remotely to ensure its reliability
- Provide aggregate views of your sites via a centralized WebCenter and timely summary reports via email

Caterpillar's National Maintenance Support Offers Rental Benefits

Under a national agreement you are linked with the unequaled resources and full product support of the Caterpillar dealer network. You will receive access to the worldwide Cat Rental network inventory of generator sets and chillers to meet your special needs. Caterpillar's one point of contact brings you rental advantages:

- The industry's largest and most modern rental fleet
- Reliable equipment built exclusively for rental
- Turnkey service around the clock
- One contact for your rental needs

One Point of Contact will Provide Services for all Manufacturers and Models:

Generator Sets

CATERPILLAR®

Caterpillar®

One Point of Contact for National Maintenance Support

CATERPILLAR®

Caterpillar. The Difference Counts.™

One Point of Contact for National Maintenance Support

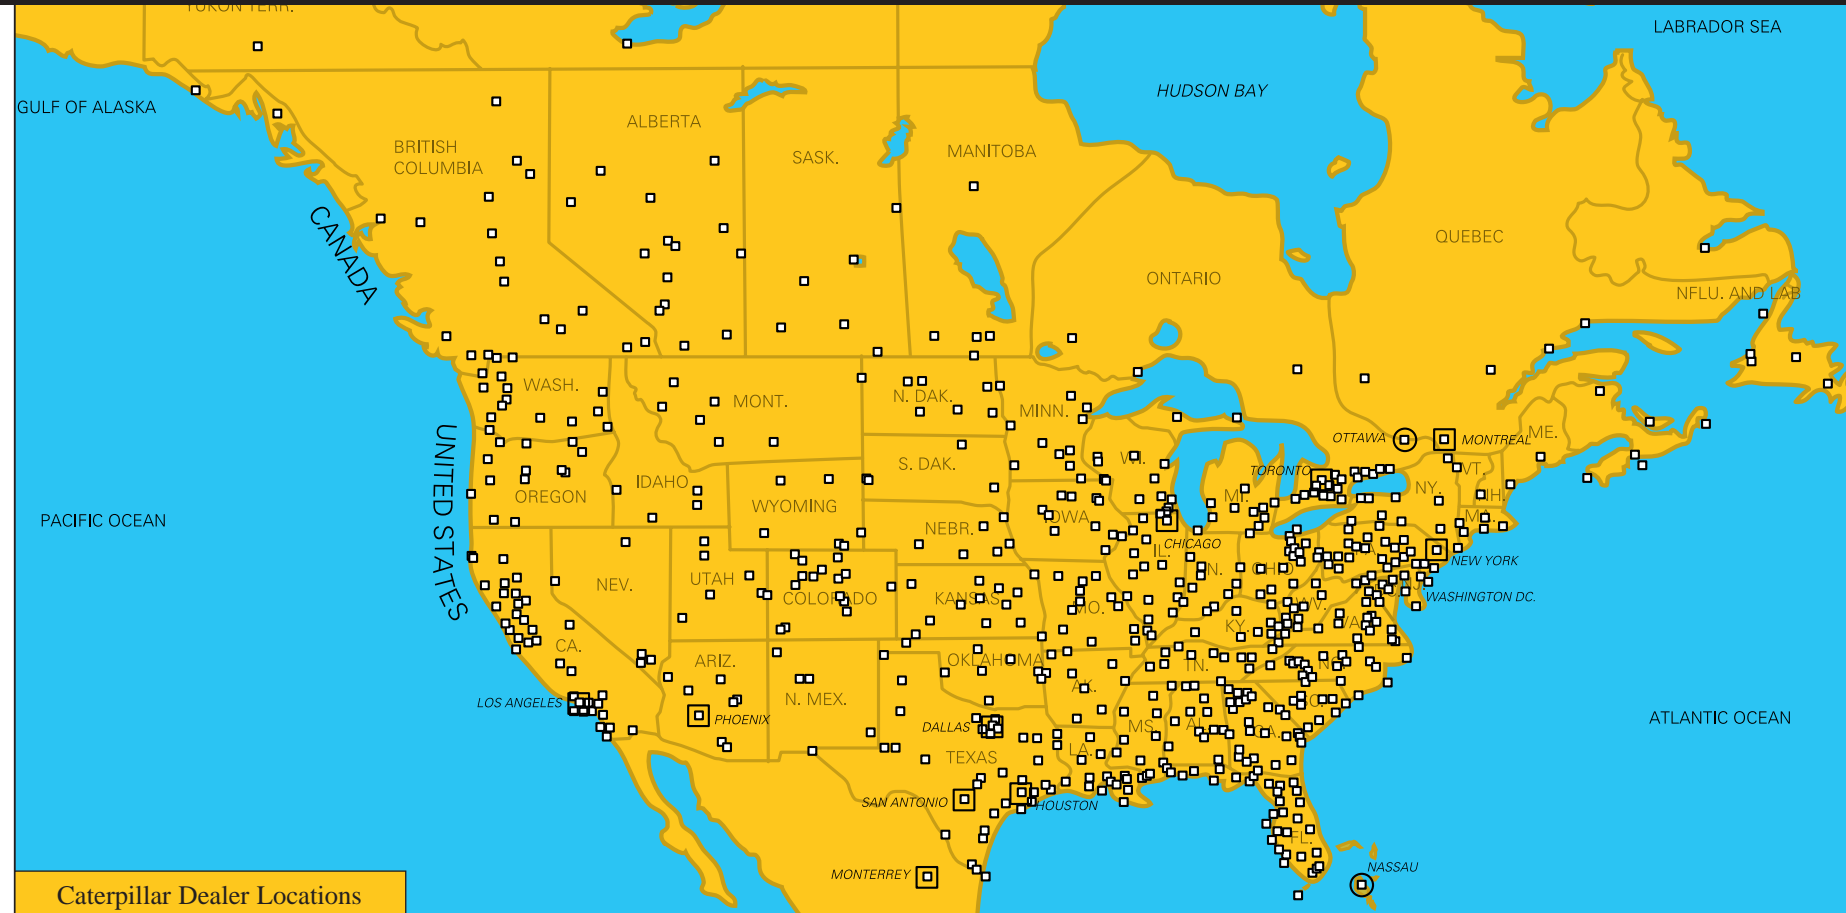

Caterpillar's one point of contact offers a variety of services from scheduled maintenance programs to parts and service support, diagnostics and emergency response for all your power systems across the United States and Canada. One point of contact for national service. One point of contact for Caterpillar support.

For companies with power generation systems spread across the country, coordinating preventative maintenance and service programs in multiple locations can be a time-consuming task, with multiple locations, multiple brands, and multiple service vendors to manage.

Caterpillar's national maintenance support makes it easy for you by taking the complexity out of coordinating maintenance and service programs. All of your maintenance needs for each of your power systems nationwide (**including all manufacturers and models of gen sets, switchgear, automatic transfer switches, UPS and even 24-7 monitoring services**) can be managed and billed through a single contact. Everything is handled – just one contact and one point of invoice.

Caterpillar has the systems and processes to provide you the service you need, whenever you need it. For over 75 years, Caterpillar has been helping build the world's infrastructure and, in the process, one of the most reliable parts distribution networks on the planet.

Caterpillar has the people to make it all a reality, with 64 dealers and over 35,000 employees at 106 Caterpillar facilities in North America.

Caterpillar Dealer Locations

One Point Means:

From an administrative standpoint, Caterpillar's national maintenance support makes great sense. By working with Caterpillar's one point of contact, you can manage all aspects of your system's preventative maintenance and upkeep from a single source. It eliminates the need to manage multiple vendors, providing reliable, consistent service and across-the-board reliability.

Why Choose One Point of Contact?

- Time savings by using a single source – not managing multiple vendors
- A single point of contact for both service and maintenance
- Just one point of invoicing for all program services
- Proactive maintenance management
- Consistency in maintenance procedures and schedules
- Increased system reliability
- Flexibility to fit your needs
- Covers all manufacturers and models

For convenient, consistent service for power systems from coast to coast, one point of contact means all the sense in the world.
